Spice Route Kitchens | Weekly Operations Review

Leadership recurring report | Recommended cadence: Weekly | Data window: 19 May–17 Aug 2026

Metric	Current view
Average compliance	82.71%
Compliance pass rate	60.8% (1,763 / 2,899 compliance-bearing submissions)
Missing daily submissions	921 of 3,640 expected (74.7% completion)
Total tickets	304
Ticket status	221 Closed | 42 Escalated | 41 Open
High-priority tickets	62
Overdue tickets	83*

*The Tableau dashboard currently calculates overdue tickets using TODAY(), so this figure is live/time-dependent. For a fixed report snapshot, use the dataset end timestamp (17 Aug 2026 23:47) as the as-of date; that produces 79 open/escalated overdue tickets.

1. Executive readout

Operational risk is concentrated in compliance discipline and checklist completion. Average compliance is 82.71%, but only about 60.8% of compliance-bearing submissions meet their applicable threshold. The network also has 921 missing daily Opening/Closing checklist submissions, equivalent to 74.7% completion against the expected daily cadence. Leadership should treat completion discipline and low-performing outlets as the immediate operating priorities.

The weekly compliance trend is broadly flat-to-softening: weekly averages moved from roughly 84% in late May/early June toward about 82% by late July/August. This suggests the issue is persistent rather than a single-week anomaly.

2. Where attention is needed

Outlet	Compliance	Below-threshold submissions
Delhi – Connaught Place	54.83%	94.4%
Ahmedabad – SG Highway	57.57%	92.8%
Nagpur – Civil Lines	62.63%	81.0%
Nashik – College Road	66.89%	81.5%
Pune	72.40%	—

The strongest compliance outlets include Surat (95.06%), Gurgaon (94.75%) and Coimbatore (94.04%). At area-manager level, Priya Nair's group has the lowest average compliance at 77.81%, versus 86.11% for Dev Reddy and 86.46% for Vinod Patel.

3. Checklist discipline

Expected daily submissions: 20 outlets × 91 days × 2 daily forms = 3,640. **Actual:** 2,719. **Gap:** 921. The largest completion gaps are at Nashik, Nagpur, Delhi and Ahmedabad. This should be reviewed alongside compliance because low submission frequency can hide operational problems rather than prove they are absent.

4. Ticket health & recurring issues

Area	Observation
Backlog	42 Escalated + 41 Open = 83 non-closed tickets
Priority	62 High-priority tickets; 159 Medium; 83 Low
Categories	Equipment 60; Facilities 49; Inventory 48; Staffing 44; Safety 43; Hygiene 42
Recurring themes	Ice machine leaks, exhaust-hood faults, freezer/compressor issues; staffing shortages; packaging/stock shortages; safety/fa

5. Leadership actions for the next week

1. Put Delhi–Connaught Place, Ahmedabad–SG Highway, Nagpur–Civil Lines and Nashik–College Road on a focused recovery plan with outlet-level owners.

2. Require daily Opening and Closing checklist completion tracking, with exceptions escalated the same day.

3. Review the top recurring equipment and facilities failures for preventive-maintenance/root-cause action, not only ticket closure.

4. Review the 62 high-priority tickets and the non-closed/overdue backlog in the weekly operations meeting.

5. Use the live Area Manager dashboard for daily intervention; use this weekly report for leadership trend review and accountability.

Recommended delivery

Cadence: Weekly, ideally at the start of the operations leadership review. **Format/channel:** 1–2 page PDF or email-ready report, accompanied by the live Tableau dashboard. The dashboard supports daily drill-down; the recurring report creates a stable week-over-week narrative for leadership.
